                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ઠ
                                                                                                                                                                                                               /do xere="reson:9823"
/clone="PSGUBLIB 32807"
/tissue type="Peyer's patch"
/clone lib="UnwinkPM3"
/note="Organ: small intestine, jejunum; Vector:
pcWVSPORT6; Site 1: Not1; Site 2: Sal1; Jejunal Peyer's
patches were isolated from healthy, 4-6 week old
cross-bred pigs. RNA was extracted either immediately or
after 3 hours stimulation in an Ussing chamber with one of
the following treatments: 1) no treatment, 2) Salmonella
choleraesuis vaccine strain SC-54, 3) phorbol myristeate
actete, concanavalin A, and 8-bromo-cyclic AMP, and 4)
lipopolysaccharide and cholera toxin. Each treatment was
performed in the presence and absence of cycloheximide.
Purified poly A + RNA from each of the treated tissues
(2-4) was combined together, reverse transcribed, and
cloned in to pcWVSPORT6 to make a library of approximately
530,000 recombinant clones with an average insert size of
1.0 kbp. Poly A+ RNA from freshly isolated and non-treated
tissue from an Ussing chamber (treatment 1) was cloned in
the same manner to produce an unstimulated cDNA library of
approximately 900,000 clones with an average insert size
of 1.5 kbp. Equal portions of the two libraries were
pooled and then subtracted with porcine ST fibroblast RNA
to create a subtracted worth a average insert size of
1.0 kbp."

Sequence 1386, Application US/09864761

Patent No. US20020048763A1

GENERAL INFORMATION:
APPLICANT: Penn, Sharron G.
APPLICANT: Rank, David R.
APPLICANT: Hanzel, David R.
APPLICANT: Chen, Wensheng
TITLE OF INVENTION: HUMAN GENOME-DERIVED SINGLE EXON NUCLEIC ACID PROBES USEFUL FOR FILE REFERENCE: Acomica-X-1
CURRENT APPLICATION NUMBER: US/09/864,761
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 406
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    249
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        426
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                446

Sequence 18145, Application US/09864761

Patent No. US20020048763A1

GENERAL INFORMATION:

APPLICANT: Penn, Sharron G.

APPLICANT: Hanzel, David K.

APPLICANT: Hanzel, David K.

APPLICANT: Chen, Wensheng

TITLE OF INVENTION: HUMAN GENOME-DERIVED SINGLE EXON NUCLEIC ACID PROBES USEFUL FOR TITLE OF INVENTION: GENE EXPRESSION ANALYSIS BY MICROARRAY

FILE REPREMENCE: Aeonica-X-1

CURRENT APPLICATION NUMBER: US/09/864,761

CURRENT FILING DATE: 2001-05-23

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  원
                                                                                                                                                                                                                                                                                                               The invention relates to purified proteins and genes encoding them, that are involved in T cell activation (I) and has an amino acid deletion, substitution or addition in the amino acid sequences. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of autoimmune disease (rheumatoid arthritis, asthma, multiple sclerosis and diabetes), allergic disease, infectious disease, AIDS, and acute or chronic rejection at organ transplant or bone marrow transplant. This sequence corresponds to a cDNA for a protein involved in T cell activation.

The invention relates to breast specific polypeptides (BSPs) and nucleic acids (Dreast specific nucleic acids, BSNAs) encoding them. The invention acids to vectors and host cells comprising a BSNA sequence; antibodies against BSPs; the recombinant production of BSPs; methods of detection of BSNAs or BSPs in a sample; kits for detecting a risk of cancer for presence of cancer in a patient; and vaccines comprising a BSNA or BSP. The invention additionally discloses fragments, methods for proteins, homologous proteins and allelic variants of BSPs; methods for identifying and designing agoinists and artegonists of BSPs; methods for identifying and monitoring breast itssue; producing engineered breast identifying and monitoring breast; producing engineered breast cissue for treatment and research; producing ransgenic animals and cells comprising BSNA sequences; aptemers evolved to bind spocifically to BSPs; and single exon probes based on BSNA sequences. BSPs and single exon probes based on BSNA sequences. BSNAs and antibodies against BSPs are useful for identifying, diagnosing, and non-cancerous disease states in breast tissue. Sabs and BSNAs may additionally be used to identify and monitor breast tissue, in screening for BSP agonists and antagonists, and in the
                                                                                                                                                                                                      New breast specific polypeptide useful for identifying, diagnosing, monitoring, staging, imaging and treating breast cancer and non-cancerous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  breast cancer; metastasis; non-cancerous disease; breast tissue;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; breast specific polypeptide; BSP; breast specific nucleic acid;

ction of engineered breast tissue for treatment or research. BSNAs lso be used in gene therapy and in the production of transgenic ls and cells. The present sequence represents a breast specific ic acid (BSNA) used in an example of the invention.	cores: 0 754.00 ilarity: 98.54 Similarity: 98.54 :	687A-3 (1-949) x ADC24898 (1-6831)	1 MetSerSerGlyLeuTrpSerGlnGluLysValThrSerProTyrTrpGluGluArglle 20	21 PheTyrLeuLeuLeuGlnGluCysSerValThrAspLysGlnThrGlnLysLeuLeuLys 40	45	41 ValProLysGlySerIleGlyGlnTyrIleGlnAspArgSerValGlyHisSerArgile 60 	61 ProSerAlaLysGlyLysLysAsnGlnIleGlyLeuLysIleLeuGluGlnProHisAla 80	O 59	81 ValleuPheValAspGluAspValValGluIleAsnGluLysPheThrGluLeuLeu 99 	0	ιO Η	120 LysGlyLeuGlnIleAspValGlyCysProValLysValGlnLeuArgSerGlyGluGlu 139 	0 LysPheProGlyValValArgPheArgGlyProLeuLeuAlaGluArgThrValSerGly 15	5 AAATITICCIGGAGIIGIACGCIICAGAGGACCCCIGTIAGCAGAGGACAGGCICCGGA 20 0 Ilabbabagiwajianianianianianianianianianianianianiani	Incomparing the comparing th	0 TyrGlnGlyLysGlnLeuPheGlnCysAspGluAspCysGlyPheValAlaLeuAsp 198	o incendedonantacettiiileneiteneitenitaanitaanitaitaanitaitaanitaitaatiitaan		9 AspThrMetGlnValGluLeuProProLeuGluIleAsnSerArgValSerLeuLy	ıo	9 -GlyGluThrIleGluSerGlyThrValIlePheCysAspValLeuProGlyLysGluSe 258	1 - CONGRESSION OF THE COORDINATION OF THE CONTROL

proliferative,

to treat cell present neurological,

Corley NC;

AAA08581-96 encode human cytoskeleton associated proteins 1 to 16 (CYSKP-11 to CYSKP-16) respectively. The sequences can be used to treat and diagnose cancer and cell proliferative, autoimmune/inflammatory, vesicle trafficking, neurological, cardiovascular, cell motility, reproductive and muscle disorders. Pharmaceutical compositions containing CYSKP-2 to CYSKP-16 can be used to treat or prevent disorders associated with decreased expression or activity of CYSKP (claimed), for example, attherosclerosis, cirribasis, hepatitis, myelofibrosis, psoriasis, cancers, autoimmune/antinflammatory disorders such as allergies, anemia, asthma, acquired immunodeficiency syndrome (AIDS), Crohn's disease, diabetes mellitus, Goodpasture's syndrome, osteoarthritis, scleroderma and trauma. CYSKP antagonists can be used to treat or prevent a disorder associated GCCTTATGGAGCCAAGAAAAGTCACTTCACCCTACTGGGAAGAGCGGATTTTTTACTTG 329 GGAAGTATAGGACAGTATATTCAAGATCGTTCTGTGGGGCATTCAAGGATTCCTTCTGCA 448 cricitcaagaargcagcgrracagacaaacaaacacaaagcrccrraaagraccga- 388 LeuLeuGlnGluCysSerValThrAspLysGlnThrGlnLysLeuLysValProLys 43 63 64 LysGlyLysLysAsnGlnIleGlyLeuLysIleLeuGluGlnProHisAlaValLeuPhe 83 Glyser1leGlyGlnTyr1leGlnAspArgSerValGlyHisSerArg1leProSerAla GlyLeuTrpSerGlnGluLysValThrSerProTyrTrpGluGluArgIlePheTyrLeu Sequence 4527 BP; 1351 A; 823 C; 1005 G; 1348 T; 0 U; 0 Other; with increased expression or activity of CYSKP (claimed) 4527 944 0 2 15 Length:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to methods of identifying compounds that alter on more biological activities of CD40. One method involves screening for moleculas that modulate the binding of NP-kappaB essential modulator (NEMO) and CYLD. The methods and compositions of the invention of determining compounds that agonize or antagonize a CD40 signaling activity, are useful for the further definition of CD40-mediated signaling pathways, and for manipulation of CD40-mediated cellular responses. They also provide therapeutic agents for treating disorders the immune system, and inflammatory and cancer diseases. The present sequence represents a DNA encoding the human CYLD polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CCTTCTGCAAAAGGCAAGAAAAATCAGATTAGATTAAAAATTCTAGAGCAACCTCATGCA

 The invention relates to purified proteins and genes encoding them, that are involved in T cell activation (I) and has an amino acid deletion, substitution or addition in the amino acid sequences. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of autoimmune disease (rheumatoid arthritis, asthma, multiple sclerosis and diabetes), allergic disease, infectious disease, AlDS, and acute or chronic rejection at organ transplant or bone involved in T cell activation.

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous size as peripheral nervous size as peripheral nervous size as peripheral nervous and the peripheral nervous as peripheral nervous and the peripheral nervous as the contained of localised neuropathies and central nervous system diseases, such as lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, architicis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
 Novel nucleic acids and polypeptides, useful for treating disorders such as central nervous system injuries.

sequence represents a human
 and polynucleotides are useful for the treatment of diseases of ophthalmic, neurological, immunological and nephritic systems. They may also be used to treat hormonal dysfunction, cancer, atherosclerosis and diabetes. The antibodies are useful for detecting or quantitating the polypeptide in tissue. The polypeptides can also be used as molecular weight markers and as a food supplement. This sequence represents a humpolynucleotide of the invention.

 The invention relates to a polynucleotide comprising a sequence given in the specification, or its mature protein-cading portion, or its scomplement. The polynucleotide is useful for treating diseases e.g., cancer or neurodegenerative diseases and many others listed in the specification. The present sequence represents a novel human cDNA. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20030104529.

largeth cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonuclectide complementary to the complementary strand of a polynuclectide which comprises one of the 5602 complementary strand of a polynuclectide comprises one of the 5602 oligonuclectide sequences defined in the specification, where the oligonuclectide comprises at least 15 nuclectides; or (b) a combination of a polynuclectide which comprises a 5 -end complementary strand of a polynuclectide which comprises a 5 -end sequence and an oligonuclectide comprising a sequence complementary to a complementary strand of a polynuclectide which comprises a 5 -end sequence and an oligonuclectide comprises a 1 -end sequence complementary to a conjumnal confict sequence and sequence is selected from those defined in the configurally full-length comprises and the combination of the 5'-end sequence sets can be used in antisense therapy and in compensation. The primer sets can be used in antisense therapy and in comparisons. The primers are useful for synthesising polynuclectides, checking and comparisons of the abnormality of the proceins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs and any specialised methods. AAH13633 to AAH13633 represent human amino acid sequences; and any the exemplification of the oligonuclectides. all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 YThrVall1ePheCysAspValLeuProGlyLysGluSerLeuGlyTyrPheValGlyVa 265
